Hiring Team

Cognizant

Dear Hiring Team,

I am applying for the Full Stack Developer opportunity at Cognizant. My background aligns well with the role's focus on responsive web applications, dashboards, interactive user interfaces, and API-driven systems. At NBCUniversal, I built a production React and Next.js application used by hundreds of employees and delivered workflow-heavy reporting and compliance solutions across frontend, data, and automation layers. At Enerex, I built a complex React and Next.js Outlook add-in UI for AI-assisted contract processing and also delivered the supporting Azure-based backend services and integrations. Across these roles, I have worked extensively with JavaScript, TypeScript, React, REST APIs, cloud services, and data-driven business applications.

I would be a strong fit for Cognizant because I combine frontend depth with practical full-stack delivery. I have built user-facing systems that need strong usability, responsive performance, secure integrations, and reliable backend workflows. My experience also includes Azure delivery, CI/CD, SQL-backed systems, and close collaboration with product and business stakeholders to ship maintainable solutions. Cognizant's emphasis on modern interfaces, operational workflows, and full-stack AI-enabled delivery is closely aligned with the type of work I have been doing and want to continue growing in.

Sincerely,

Jose Bande Serrano
