Hiring Team

DFIN

Dear Hiring Team,

I am applying for the AI Automation Engineer role at DFIN. The position aligns closely with the work I have been doing across AI-enabled automation, enterprise workflow systems, and cross-functional delivery. At Enerex, I architected and built AI-powered automation solutions for contract-processing workflows, including a multi-step background processing platform, API-based task intake, queue-driven Azure Functions workers, and an Outlook add-in that used AI to analyze documents and return structured business data for user review. That work required practical AI implementation, production integrations, and end-to-end ownership from solution design through deployment.

I also bring direct experience building governed enterprise systems in regulated environments. At NBCUniversal, I built a complex compliance automation platform on Power Platform, created dozens of Power Automate flows and dataflows, designed Dataverse-backed data models, and implemented AI bots integrated with Microsoft Teams. That work involved close coordination with engineering, business, and operational stakeholders while supporting controlled workflows, access considerations, and maintainable delivery. Across these roles, I have translated business problems into scalable technical solutions using APIs, automation, AI services, and modern application architecture.

I would be a strong fit for DFIN because I combine hands-on AI development with practical execution discipline. I have built AI agents, workflow automation, and user-facing systems that improve process efficiency while fitting into enterprise delivery environments. DFIN's focus on client experience transformation, responsible AI deployment, and measurable business outcomes is directly aligned with the type of work I want to continue doing.

Sincerely,

Jose Bande Serrano
